

# Seven Eleven Hailstorm

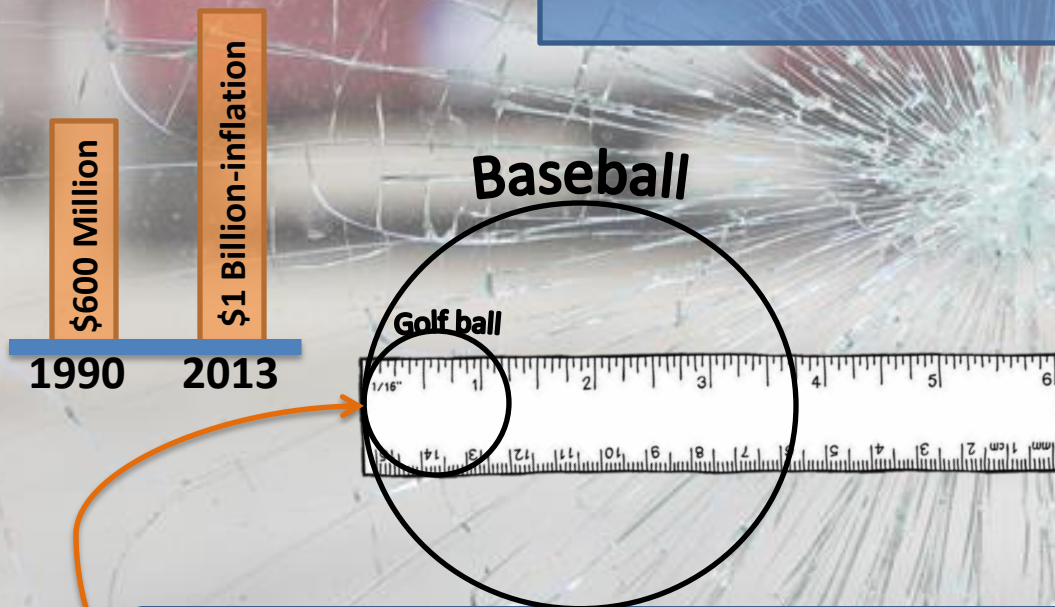

## July 11, 1990

Credit: CBS

On July 11th, a large rotating thunderstorm blew up northwest of Denver and moved southeast. The storm fed off a combination of moist easterly surface winds and a cold pool of air aloft. Cooler air in the atmosphere allowed for the formation of large hailstones.

### Damages (in dollars)

Storm dropped golf ball to baseball size hail, in a swath that was 5 to 10 miles wide
